## **MY PERSONAL TESTIMONIAL**

Dear UNFPA,

My name is Mondri Julius Elikana and I've been working in Yei Civil Hospital since 2018 as a National UN Volunteer midwife. I am very delighted to work as a UN volunteer with support from UNFPA and through your excellent leadership management skills in the UNFPA office. I have gained a lot of knowledge, working experience and skills in delivering healthcare services, and positively contributing to the reduction of maternal/neonatal mortality and morbidity in South Sudan. UNFPA has done a great job in changing my life style more especially sponsoring me during my midwifery course training and I have become proficient in helping myself and the family members at large. Therefore, I wish UNFPA to continue in supporting this program to maintain high standards for quality and accuracy provision of health care services in South Sudan. My future plan is to go for bachelor degree in midwifery and write a research about men perception on utilization of family planning services in Yei River County.
